ALCATEL 2750

The compact mini-switchboard

With Alcatel 2750, small businesses and residents can finally enjoy efficient telephone services to meet their needs.

This small professional system offers numerous functions such as call transfer, fax switching or call barring.

It optimises the use of telephones or other telecommunication terminals (fax machines, answering machines, etc.) in a simple way.

ALCATEL

The Hi-Speed Company

Tailored to your needs

If you are looking for a powerful tool to improve the effectiveness of your communications and customer greetings, the Alcatel 2750 is for you.

- It not only allows you to use your existing terminals, but also to add those you need (telephones, fax machines, answering machines or cordless phones) according to your requirements.

- You can call external numbers as well as anyone of the eight internal extensions and transfer calls from one extension to another. With Alcatel 2750, your extensions can finally communicate with each other.

- Thanks to **fax switching**, there is no longer any need for a dedicated line to the fax machine. When you receive a fax call, Alcatel 2750 identifies the call and automatically routes it to your fax machine without your telephones ringing.

Discreet

Alcatel 2750 is quick and easy to install. Compact and attractively designed, it has a wall attachment for easy integration in your office or home environment.

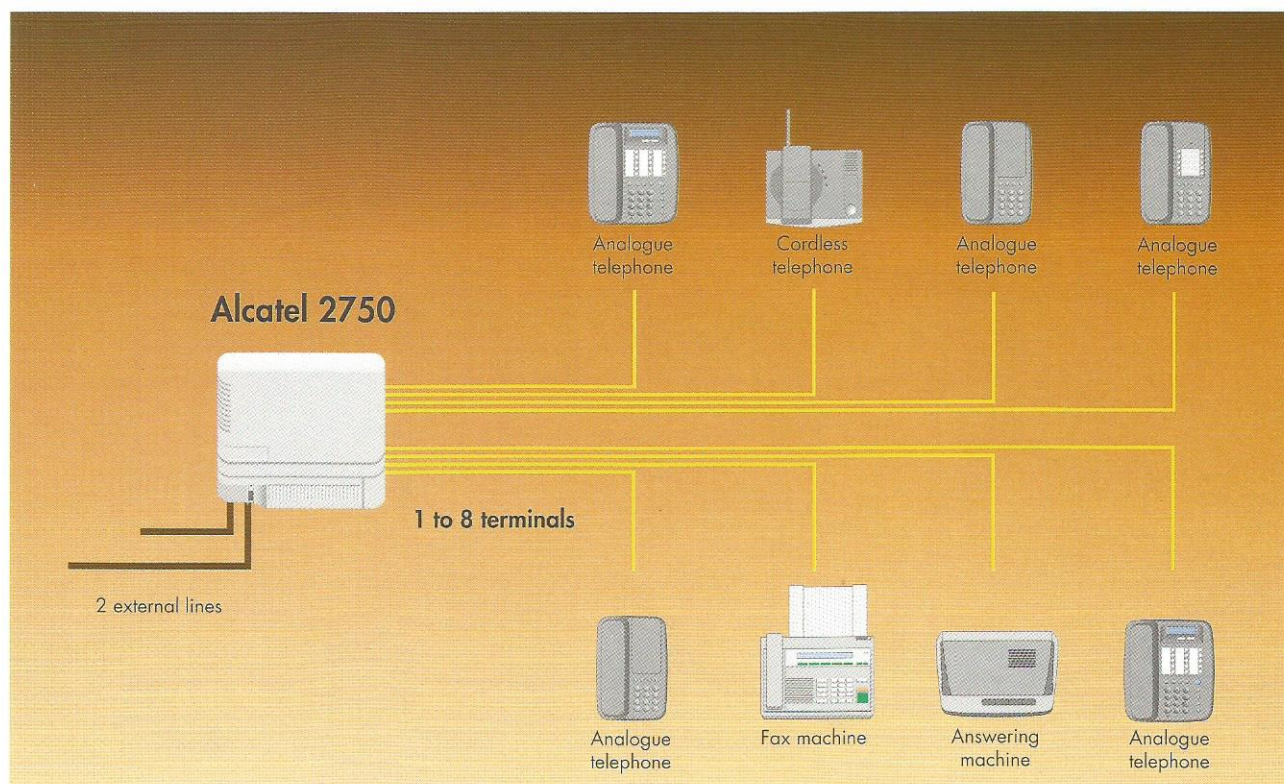

Alcatel 2750

At your service

- What if the outside lines are busy when you want to get through to someone? Activate the **automatic call-back** function and Alcatel 2750 will let you know as soon as one of the two lines is free.

- With the **day-night switching** function, Alcatel 2750 makes life easier for you: you can change the configuration of your installation at any moment to suit your timetable. For example, you can route all calls to the extension of your choice, at the hour of your choice.

Attentive to your customers

- Thanks to the **music on hold and call transfer** functions, your callers are welcomed and put through quickly and efficiently. Your customers will be satisfied and sure to call again.

- Your terminals now correspond to an extension number rather than to a line. This will give your communications a new dimension. Thanks to **overdialling** your callers can call the required extension directly.

Comfort and security at last

Alcatel 2750 offers you a series of functions specifically designed for residential use to improve your everyday comfort.

- With the **general call** function you can activate all internal extensions to ring in one single operation.
  You can look for any person near a telephone in your house without knowing where they are, allowing you to deal with calls more quickly and comfortably.

- Ideal for remote surveillance of the baby room, the **room monitoring** function is integrated in the system. You can now relax in the living room while the baby sleeps.

- In addition to the **emergency** call function, a pre-programmed external or internal number is automatically dialled, just by lifting the handset. Your children can call the number of your choice without having to dial it. You can thus go out with your mind at rest and confidently rely on Alcatel 2750.

The micro-switch Alcatel 2750 is also available with the **door-opener** option:

- A distinctive ringing tone identifies door-opener calls among usual telephone tones.

- The intercom function allows you to identify your visitors before door-opening, for a personalised greeting, and increased security.

- Door opening can thus be activated from any connected telephone set.

Characteristics	
Capacity	• 2 external lines • 8 internal terminals
